CRYPTO & COFFEE

Bitcoin (BTC) was able to hold onto minor gains as market participants were seen treading cautiously ahead of the key technical levels. The next big level is the 200-day moving average (DMA) level, which also coincides with \$8,000 level.

Heading into the final few weeks before the eagerly awaited Bitcoin (BTC) block reward halving, the risk is that market will get somewhat jittery, evidently there is plenty to suggest option call selling to fund downside protection. So much so that vol is now just above pre-March vol spike levels.

The futures curve structure also remains in the state of flux, with the curve shifting from modest backwardation to contango and back again. Despite Ethereum's strong run, the futures term structure is just as fluid.

In terms of news flow, Ebang International Holdings, one of the leading manufacturers of bitcoin mining equipment, aims to raise up to \$100 million from an initial public offering (IPO) in the US. Elsewhere, the latest figures released by financial rating agency Weiss Crypto Ratings, Cardano (ADA), Tezos (XTZ), Cosmos (ATOM) and Fantom (FTM) are the top coins by in the "technology" category, ranking above Bitcoin (BTC) and Ethereum (ETH).
