CRYPTO & COFFEE

Despite the recent reports that Bitfinex will have to face allegations from New York State that it hid millions in lost funds, together with the news that the eagerly anticipated initial stage of Ethereum 2.0 - dubbed Phase 0 - may not go live until the start of 2021, failed to dent investment appetite for risk.

Instead, the market traded broadly higher, with the aforementioned fundamental developments seemingly overlooked for the time being.

Instead, the focus remained on the fast growing DeFi market place and also the fact that the latest mining difficulty adjustment saw a change of +9.89%, bringing the level to a new all-time high of over 17.3 trillion. As a reminder, only last week saw the hashrate top its previous high.

In terms of some of the stand outperformers, Tezos jumped almost 20%, trading at its highest level since early June. The surge higher came in the wake of recent developments that blockchain services provider Figment Networks has launched a new platform known as Data Hub, which is supposed make it easier for developers to build atop certain blockchains such as Tezos. Through Data Hub, developers can access various blockchains without having to run their own nodes.
